PROQUIL-CAR SHAMPOO FOR CLEANING VEHICLE BODYWORKS

CHARACTERISTICS

PROQUIL-CAR is a product especially designed for cleaning vehicle bodyworks. **PROQUIL-CAR** is a viscous liquid, red coloured with a lemon scent, high concentration in active principles and neutral pH.

The high cleaning power of **PROQUIL-CAR** and its compatibility with any type of water, due to its high contents in chelating agents for the salts causing hardness, makes possible its use when any type of water is present with no precipitation of salts during cleaning. This could cause a decrease in the cleaning power and the appearing of white stains on the bodyworks.

In cases when the water for rinsing is very hard, it's recommended to rinse thoroughly in order to avoid the appearing of the above mentioned white stains.

Due to its neutral pH, it does not attack the paints and respects, when present, the wax films.

Its high foam-forming power, the synergic action of its components and its high cleaning power get better results not leaving any remains and reduces the rubbing while cleaning.

USES

It's recommended when cleaning bodyworks of any type of vehicles, by hand or with pressure machines. It produces a great amount of foam which results in a deep cleaning with no harm for paints.

METHOD OF USE

PROQUIL-CAR can be used pure, as it's supplied; due to its concentration, it's recommended to use it diluted with water.

For cleaning with automatic machines, use dilutions of 1 litre of **PROQUIL-CAR** and 4-5 litres of water, using small proportions of the mixture for cleaning.

When cleaning cars by hand, mix a proportion of 1 litre of product with 60-100 litres of water.

NOTES: In order to get better final results, especially when using hard water, it's recommended not to wash the cars in the sun, since the rinsing could leave salt remains. It's not recommended to apply **PROQUIL-CAR** on the bodywork when it's hot, being interesting to rinse previously with cold water before starting the cleaning.

PRECAUTIONS

Don't swallow. Keep out of the reach of children. Not-compatible with cationic products. In case of contact with eyes or mucosae, wash with plenty of clean water.

PACKAGING

PROQUIL-CAR is packaged in 25 and 60 litres, non-reusable, plastic containers.

ADVANTAGES

- High cleaning power
- Hard water resistant
- Highly concentrated product
- High cleaning power with low doses
