DESCA-P

CLEANING OF FAÇADES AND GRAFFITI ON UNPOLISHED GRANITE SURFACES

CHARACTERISTICS.

DESCA-P is a clear, orange-greenish coloured cleaner, with acid character and specific for façades and other unpolished granite surfaces which have paint remainders after applying paint-removers. Cleaning of environmental pollution on unpolished granite surfaces. Cleaning of façades, walls, terraces, etc. Its high cleaning power removes every paint remainders and existing shadows.

Formulated based on acids with high scale-removing power, together with humectant and stable cleaners in acid medium, it has the following technical data:

APPEARANCE:	Clear liquid
COLOUR :	Yellow-orangish-greenish
DENSITY :	1,13 +/- 0,02 gr/cm ³
ACTIVE ACIDITY :	10,5 +/- 0,5 cc. NaOH 1N/gr.
TOTAL ACIDITY :	11,5 +/- 0,5 cc. de NaOH 1N/gr.

USES:

DESCA-P is especially recommended for cleaning façades and unpolished granite surfaces which have paint and graffiti remainders after applying paint removers, due to the impossibility of penetration the bottom of the granite pores, leaving, while removing paints, the well-known remainders and shadowed areas in the painted areas. It's not recommended to use it on polished granite surfaces, since it will remove the gloss. The application on any type of surfaces should include a previous test.

METHOD OF USE:

DESCA-P can be applied pure, as it's supplied or diluted in different proportions with water, depending on the dirt degree or the intensity of the existing remainders on the surface to be treated. It should always be applied with brush or roller, systematically on the surface and always **from bottom to top**. Let work about 30 seconds and 18 minutes, depending on the composition of the surface to be treated and on the dirt present on the substrate. (See precautions concerning the surfaces to be treated) Remove afterwards with pressure water (it's recommended 40 atm minimum), working again **from bottom to top**.

YIELD:

Depending on the type of surface to be treated and on the dirt degree, the yield can vary. We can indicate as average yield about 4-6 m² per litre of product.

PRECAUTIONS CONCERNING THE SURFACE TO BE TREATED:

Above all, it should be noticed that the product **DESCA-P** attacks surfaces made of limestone, glass, polished marble, tiles, etc., thus being recommended a previous test when in presence of these surfaces. A characteristic clue of the existence of surfaces with calcium contents, is the formation of bubbles when applying **DESCA-P** on these type of surfaces.

While using, it's recommended to cover windows and frames close to the application place, saturating with water the earth and lawn in the nearby.

PRECAUTIONS WHEN USING

Due to its strongly acid character, any contact with the skin should be avoided. So it's necessary to protect eyes and skin by wearing goggles, gloves and protecting masks, as well as watertight boots and acid resistant clothes. Do not swallow. Keep out of the reach of children.

MEASURES IN CASE OF ACCIDENT:

A) In case of vapour inhaling:

Place the patient far from the product. Let him rest and seek medical advice. This type of accidents are not frequent when working in the open. In case of working in closed places or with little ventilation, it's necessary the use of suitable masks.

B) Contact with skin or working clothes:

Take the clothes off immediately and wash with plenty of water. The places where the product has been in contact with the skin, should be washed with plenty of cold water and treated with **calium gluconate gel** at **25%** softly massaging the affected area with the product. Seek medical advice and inform about the possibility of burns with fluorhydrate. In case of strong pain, it can be softened with local injections of **calcium gluconate**, previously consulting a doctor.

C) Contact with eyes or mucosae:

Wash with plenty of water. In case of eyes, keep the eyelids well open in order to assure that the water wash properly the whole eye. Seek medical advice, preferably an eye specialist.

D) In case of swallowing:

Drink immediately plenty of cold water and afterwards take **500 mg calcium gluconate** tablets (4-6 chewing tablets). Seek medical advice.

PACKAGING AND STORAGE:

DESCA-P in packaged in 30 and 60 litre, non-reusable, plastic containers.

DESCA-P must be stored, keeping the containers tightly closed and far from alkaline products, with which it's non-compatible.

ADVANTAGES

- Strong cleaning power
- Powerful cleaner for unpolished granite surfaces.
- Removes paint remainders where paint-removers are not efficient.
